

## COLD STORAGE ENVIRONMENT?

The New CK75 Is Ready.

*If your DC workers move frequently between dry, refrigerated, and frozen areas throughout the day, you know the importance of handheld computers built specifically for rugged cold storage environments.*

Now there's a new computer that takes cold storage competence to a new extreme. The Honeywell CK75 rugged mobile computer helps maximize worker productivity in cold storage environments while preparing your business for the future.

**Optimize worker efficiency in the most severe environments** with a device that is:

### Condensation-Proof

Non-cold storage devices come out of the freezer with condensation – preventing your workers from seeing the screen, or using the scanner. The CK75 device has powerful heaters on both the touchscreen and the scan window, preventing condensation – and the lost productivity and increased errors that come with it.

### Ultra-Rugged

The CK75 is designed to withstand the rigors of cold storage environments, including low temperatures and moisture. It can easily handle 1.8 m (6 ft) drops to concrete, 2,000 (1 m) tumbles and has an IP65 rating against water and dust. No warm-up breaks needed to keep this device running!

### Long Battery Life

The CK75 has sophisticated algorithms to maximize battery life while powering its heaters. No more leaving the freezer to recharge batteries or swap devices – your workers can enjoy uninterrupted productivity for a full shift and beyond.

## Future-Proof

The CK75 supports both Windows® Embedded Handheld and Android™, so you can extend your existing OS investments now, while preparing for the future. When your business is ready, do a simple field upgrade to move to the next-generation OS.

## Ergonomic

Despite its ultra-rugged design, the CK75 is nearly a third smaller and lighter than other devices in its class, and has a removable scan handle and large, comfortable keys for glove wearers.

## Easy to Support

You no longer need to have two different devices for “wet” and “dry” environments, with different spare pools and support and training needs. With the CK75, your business can easily standardize on one device.
